Above and left The dome consists of three parts: a wooden construction; a steel suspension system and 600 glass tiles the Glasmuseum Leerdam made together with local children.

Photo Mirad Peltash

Opposite The dome is on top of a 10-m-high fight shaft, right in the middle of the round tower fortress. Bats – who use all the Line's fortresses to sleep in – can still get inside through small openings.

Dome Fort Asperen Acquoy, Netherlands

Bureau SLA – 2015

Bureau SLA decided to return Kunstfort Asperen to the collective memory by involving local residents in the designing. For the skylight dome they built on top of the fortress, architect Peter van Assche approached local primary schools. Some 600 children each made a colourful drawing on a glass tile. The result is a space like a kaleidoscope.
